

Software Requirement Specifications for IPhO-2015 Server System

Kumar Ayush, Sandesh Kalantre, Sharad Mirani

February 13, 2015

The server is implmented using `nodejs`.To use the server the following software must be installed on the system.

- `nodejs v0.10.25`
- `mongodb-server v2.2.3`

They can be installed directly using the package manager for the os.

The various features were implemented using npm packages.These packages are listed in `package.json` file. To install these dependencies run the following command with **root access** in the project directory:

`npm install.`
